Hiring Manager / Talent Acquisition Team

Molina Health

Dear Hiring Manager,

I am writing to express my strong interest in the Senior / Principal Data Center Network Architect position at Coinbase. With over 20 years of hands-on experience designing, implementing, and optimizing large-scale enterprise data center networks, cloud connectivity, and network automation, I am confident in my ability to deliver scalable, reliable, and highly automated network solutions for your organization.

Throughout my career at industry leaders including Cisco, Kyndryl (IBM), and Ahead, I have specialized in building robust network architectures using Cisco Nexus, ACI, EVPN/VXLAN, and Multi-Site Domain (MSD) topologies. My background spans both greenfield design and complex brownfield migrations, equipment upgrades, and fabric decommissioning. In my current role as Senior Network Engineer at Ahead, I leverage Terraform, Python, REST APIs, and Ansible to manage Infrastructure as Code (IaC) and scale cloud networking on Alkira's CNaaS platform.

Key highlights of my qualifications include:

- **Data Center & Fabric Architecture:** Proven expertise in Cisco Nexus (5000/6000/7000/9000), ACI, EVPN/VXLAN, and multi-tenant Nexus Dashboard environments. Juniper, Arista and Cisco Meraki
- **Network Automation & Programming:** Extensive experience streamlining operational workflows, automating scale testbeds, and reducing manual effort using Python, REST APIs, Ansible, Bash, and PowerShell.
- **Cloud & Virtualization:** Strong background integrating enterprise fabrics with cloud environments (AWS, Azure, Alkira) and managing virtualized infrastructure across ESXi, KVM, Docker, and Kubernetes environments

Sincerely,

Alex Raytselsky
